

EUCOCURE PA
Concrete curing membrane

Description EUCOCURE PA is a non flammable curing compound of paraffin emulsion base .

Main Purpose To protect fresh concrete surfaces from the undesirable effects associated with too rapid evaporation of surface moisture . The protection is achieved by spraying EUCOCURE PA on the fresh concrete surface which rapidly form an impermeable skin over the concrete surface . The film will gradually disintegrate (on weathering and / or attrition) leaving a stain free surface

Advantages EUCOCURE PA provides a labour saving method by ensuring that all fresh concrete is cured properly without the use of continuous wetting or hessian stretched over the concrete surface .When used in accordance with our instructions , the membrane will gradually disappear through traffic and weathering .

Standards Complies with ASTM C - 309 - 89 DIN and SIA Standards .

Properties

Appearance	liquid
Colour	white
Specific gravity	1,0
Open flash point	non-flammable
Shelf life	up to 2 years

Complies with ASTM C - 309 .
ASHTO T 155 , ASTM C - 156 - 89

Coverage 6 to 8 m² per 1 kg of EUCOCURE PA
For your own interest please do not apply more than this quantity , since no additional protection is achieved by doing so .

Packing In drums containing 200 kg .
